

Ikea, Wembley

Hire details

Ikea needed a temporary customer collection area on the car park of their Wembley store whilst their own was being refurbished.

Specification

1 – 20 x 10 Absolute with Plateau roof profile

The structure featured a secure roller shutter door an industrial ramp to cope with trolleys and wheelchairs and a cassette floor that was levelled to the same height as the main building. The structure was also fitted with a temporary alarm system, full lighting and telecoms infrastructure.

SNOWDENS

Challenges

We got the call from Ikea and then had to turnaround the whole project in 7 days including planning and erection.

This was the first time we had needed to consider the installation of telecoms infrastructure therefore we needed to ensure the build allowed for cables to be installed. A hatch was put into the cassette floor to allow for the telecoms installers to use once we had completed the rest of the build.

Outcome

A workable space with minimal disruption to staff and customers. Ikea ended up hiring the structure for longer than planned. They were so impressed with the build that we have been recommended for further work if refurbishment or seasonal demands dictate the need for a temporary outlet.
